

Your Timeline for Learning React

Follow them in order — resist the urge to skip ahead

ES5

JavaScript (ES5 is enough for now)

NPM — mostly, you just need `npm install`

React

Just React. The rest comes later.

Build a Few Things

(and throw them away)

Learn to “think in React” by building many small experiments.

Webpack

Don't skip straight to a boilerplate project.

ES6

ES6

Learn the 80% you'll actually use.

arrows • let/const • import • classes • destructuring

Routing

React Router doesn't require Redux.

Learn it in isolation.

Redux

Start with the official guide: redux.js.org
